DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 21, 22, 25 and 26, drawn to a method for activating a caspase signaling cascade in a cell comprising contacting the cell with an inhibitor of FLIP-c so that at least one caspase is cleaved, classified in class 514, subclass 44.
 - II. Claims 23 and 24, drawn to an antisense oligonucleotide 15 to 25 nucleobases in length targeted to a nucleic acid molecule encoding FLIP-c, classified in class 536, subclass 24.5.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). Invention I is drawn to a method for activating a caspase signaling cascade in a cell comprising contacting the cell with an inhibitor of FLIP-c. Invention II is drawn to an antisense oligonucleotide 15 to 25 nucleobases in length targeted to a nucleic acid molecule encoding FLIP-c. In the instant case the product as claimed can be used in a materially different process of using that product,

Art Unit: 1635

such as a hybridization assay to determine cell or tissue specific expression of FLIP-c, for example.

Furthermore, searching Inventions I and II together would impose a serious and undue search burden. In the instant case, a prior art search of the method of Invention I would not be coextensive with a prior art search of the compound of Invention II.

Search of each of these inventions would require different key word searches of the compound and of the distinctive steps required by the method using different patent and non-patent literature databases. The different searches would then require subsequent in-depth analysis of the unrelated prior art literature, placing a serious and undue burden on the Office in terms of both search and examination. As such, it would be burdensome to perform examination of Inventions I and II together.
